ONSEN - ONSEN EVO

Heated towel rail:
design, wellbeing and practicality, even in the tightest spaces.

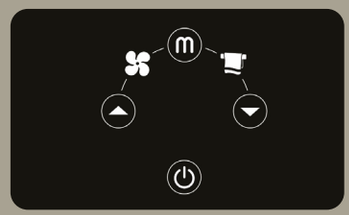
At RADIALIGHT, we see ONSEN as the essence of what we imagine our bathroom to be.
It is a design feature, because wellbeing plays an increasingly important role in our culture: the bathroom is no longer simply a room, it's a space that nurtures emotions.
It's compact and, at only 40 cm wide by 10 cm thick, it can easily be installed in even the smallest of rooms. It's practical and effective: thanks to its 750 W power and specialised heating technology it can be used as the main heating system for your bathroom or as an accessory, providing you with towels that are always warm and dry. It's easy to use, because the controls are always at your fingertips - simple and user-friendly. It's intelligent because, thanks to its versatile electronics, it adapts to our personal habits. Onsen is also available in the ONSEN EVO version, equipped with turbo fan heater to make your bathroom warm and comfortable in a few minutes. Welcome to the world of ONSEN, the great little heating accessory you never knew you needed.

Heating Style

ONSEN's unique Dual-Therm heating technology releases heat through convection and radiation at the same time.
The convection flow that comes out of the top heats the bathroom consistently and silently.
The radiation creates a pleasant warmth that envelopes you like a warm embrace, while also drying your towels.
ONSEN EVO is equipped with an additional turbo function to make your bathroom warm in a few minutes.

Electronic Controls

ONSEN Electronic display



ONSEN EVO Electronic display

ONSEN and ONSEN EVO are intelligent, because they decide how much heat is needed to reach the required temperature, avoiding a needless waste of energy. But they offer you so much more. Their multiple operating modes allow them to adapt to your lifestyle. You can set a consistent and comfortable temperature, or you can program the unit, saving money when you're not at home. If, instead, you want to heat the bathroom when you want to and for as long as you want to, the timer function is your best choice.

Technical Characteristics

- Moisture proof, powder coated metal structure.
- OSEN model Dual heating system: radiation for all-round comfort, and convection for consistent and silent heating.
